Abstract (en)
[origin: EP0151266A2] The individual parts of a fixing device for an opened door 2 for a cabin 1 whose roofs has roughly the same height as the door are arranged in such a way that the door passage remains free and the walls to the side of the door remain free. For this purpose, a fixing means 6 provided with two bores at its ends is attached to the roof 5 parallel to the front edge of the same, which fixing means 5 is rotatably mounted at one end roughly behind the centre of the door opening in a U-shaped strap 7 and is placed with its other end over a bolt 9. To fix the door 2, the fixing means 6 can be lifted from the bolt 9 using a handle 6a and can be put down onto a pin 10 attached to the door. <IMAGE>
