Abstract (en)

[origin: ES8601761A1] A wet press for use in dewatering a web of material (3), e.g. of paper, moves the web between a revolving roll (1) and a back-up device (2), together with a water absorbent band (4). The back-up device (2) has a hydrostatic pressure element (11) with a moving shoe (30) which has two pressure pockets (15,16). A piston (20) is aligned asymmetrically relative to the shoe to provide a larger area of the pressure pockets upstream than downstream of the piston centre, M.
