Abstract (en)  
[origin: EP0151738A2] The invention relates to a vacuum cleaner nozzle having a nozzle plate (2) possessing at least one suction duct (3) and having at least one strip-type brush (6) arranged at the front of the nozzle. In this nozzle (1), the nozzle plate (2) and the strip-type brush (6) are horizontally and vertically adjustable relative to each other. The horizontal adjustment travel is at least sufficiently large for the front edge of the nozzle plate (2) and the front edge of the strip-type brush (6) to lie in one vertical plane. The structural effort required for the mutual adjustment of nozzle plate and strip-type brush is substantially reduced in that the strip-type brush (6) is arranged to be vertically adjustable in the housing of the vacuum cleaner nozzle (1) and is fixed resiliently in the horizontal direction. <IMAGE>
