Abstract (en)
[origin: US4598344A] To permit selective direction of light from the reflector (9) associated with a single-ended fluorescent lamp (2), the reflector is secured in a separable housing part (4) for the fluorescent lamp (2) of which another housing part (3) retains the socket (2) to receive the base of the single-ended fluorescent lamp (2). The two housing parts (3, 4) can be snapped together in selected angular positions by interengaging, interlocking projection-and-recess connections.
