Abstract (en)

This invention concerns a rotary tool (10) with cutting inserts, which comprises for each insert (11-12-20) an anchorage block (15-120) and at least one resisting block (18) with an adjusting screw (19), such blocks (15-18-120) being lodged inside a hollow (14) which narrows towards the outside of the tool (10), in which tool (10) the anchorage block (15-120) and the resisting block (18) cooperate along a surface inclined in relation to the axis of the adjusting screw (19), which is engaged at one end in the body (110) of the tool (10) and at its other end in such resisting block (18).
