Abstract (en)  
[origin: EP0152829A2] The lifting device has two sword-like claws 33 which are displaceable along a base rail 5, face one another with their cutting edges 40 and, in a lowered position on the ground, can alternatively be moved hydraulically towards one another or away from one another and can also be lifted hydraulically. Before a load is actually lifted, the sword-like claws 33 are moved between the ground and the load into position below the latter, the load sliding over inclined sliding surfaces 39 onto the wedge-shaped sword-like claws 33. <IMAGE>
