Abstract (en)

[origin: EP0152975A1] A device for mooring a floatable body, such as a ship (12), to a mooring tower (1), comprising two tension members (8, 9), rotatable around a horizontal axis (6) and supported by the tower (1) at both sides thereof and each tensioned by a weight (10), the respective ends of said members each being connected through a rigid arm (11) to the floating body (12), in which each of said members (8, 9) has a smaller stiffness against displacement in the direction of the rigid arm (11) than in the direction perpendicular thereto.
