Abstract (en)

[origin: EP0153443A2] There is described a thin fastenable nonwoven for textile fabric-wadding laminates, where the adhesive material, which has been applied in the form of a pattern, has been printed through the nonwoven in such a way that it penetrates the entire cross-section thereof and appears in elevations on both sides. There is further described a process for manufacturing such textile laminates from an outerwear fabric, a fastenable nonwoven of the invention and a wadding material whereby the printing of the fastenable nonwoven and the process of lamination are carried out in a single, continuous operation.
