Abstract (en)  
The ligature is made from a wire filament 12 formed into a ring 16 at one end and describes a planar curve to the other terminal portion 14 which describes a spiral. The spiral lies in a plane substantially perpendicular to the plane of the curve of the filament. The spiral portion 14 can slidably engage the filament 12 adjacent the ring 16 to form a closed loop about an article 24. Pulling the ring 16 along the line of the filament 12 causes the ligature to tighten. An elbow 22 in the filament enables the ligature to be applied with one hand, leaving the applicant's other hand free to hold the article 24.
