Abstract (en)
[origin: EP0153567A1] 1. Drilling vehicle with at least one jib movable about mutually rectangular axes, wherein a support for a mounting movable about mutually rectangular axes arranged on the jib, a mounting is longitudinally-movably secured to the support and two drilling devices are longitudinally-movably supported by the mounting, characterized in that the drilling devices (42, 61) are a shot hole drilling device (61) and a large hole drilling device (42), the longitudinal axes (35, 52, 43, 67) of the mounting support (32), the large hole drilling device (42), the mounting (37) and the shot hole drilling device (61) are arranged approximately in a plane, the mounting support (32) includes U-shaped bearing supports (50, 51) arranged with a mutual axial spacing, on the free ends of each of which a guide member (46, 47) for a guide rail (45) of the mounting (37) is located and that the longitudinal axis (52) of the large hole drilling device (42) runs between the limbs (48, 49) of the bearing supports (50, 51).
