Abstract (en)

[origin: WO8503897A1] The mechanical screw driver comprises a force arm (2) and a reaction arm (1), as well as a tooth idler gear (7) and a multiple tooth ratchet (8) cooperating therewith which engages a priority of teeth of the idler gear (7) when pivoting the force arm (2) in an engaging position and which is spaced apart by sliding on the wheel of the idler gear (7) when pivoting in the other direction. A hydraulic force cylinder is provided between the two arms (1, 2). The force arm (2) comprises a driving head (9) which is inside a cylinder bore (11) and is engaged with a recess (14) of the piston (13). The cylinder bore extends transversally, particularly perpendicularly with respect to the force arm (2).
