Abstract (en)
[origin: EP0154305A1] 1. A device for securing articles to a perforated plate (1), comprising a member (3) which is substantially L-shaped in side elevation and is provided with an eye, clip, hook (6) or the like on that flange which is substantially at right angles to the perforated plate (1) whereas the other flange (8), which is parallel to the perforated plate (1), is adapted to be adjusted in position relative to the perforated plate (1) by being slidable relative to the latter and is adapted to be locked in any of a plurality of stepped positions by means of a plug-in plate (4), which is provided with plugs (9), characterized in that that flange (8) of the L-shaped member (3) which is parallel to the perforated plate (1) has in a top plan view the shape of a frame, which in both bars (10) that extend in the direction of the sliding movement are provided each with a series of teeth on that side which is opposite to the perforated plate (1), and each of said series of teeth is interengageable with at least one tooth of series of teeth (13) provided on the underside of the plug-in plate (4) on both sides thereof when said plug-in plate has been plugged in position.
