Abstract (en)

[origin: EP0154618A2] 1. Method of stabilising thin, fragile ceramic plates, consisting of mounting the said plates on a bearing structure consisting of a sandwich material, the core of which is of the bee-hive type or synthetic foam, characterized in that the said plates, produced according to the electrodeposition method, are stabilised as a result of the ceramic film participating directly in the composition of the bearing structure.
