Abstract (en)

The subject of the invention is a flow mixer for mixing fine-grained and dusty solid materials with water in a continuous manner. The mixer according to the invention comprises a feeder (1) for batching ash in a continuous manner, a moisturing chamber (2), a homogenization chamber (6) and a fluidization chamber (10). The moisturing chamber (2) preferably has a slow-speed mixer (3), whereas the homogenization chamber and the fluidization chamber are set after each other axially and have a common shaft (7) with advancing and homogenizing-mixing members (9, 11). The fluidization chamber (10) is in the form of the frustum of cone or cylinders of increasing diameters. The mixer has separate drives (4, 8), water supply stub-pipes (14, 20), bottom ash supply stub-pipe (13) and an inspection manhole (21).
