Abstract (en)

[origin: EP0155119A2] A lifting mechanism for mounting on a vehicle and for lifting a container having a hook bar onto the vehicle is characterised in that the arm which supports the hook is provided with a substantially planar rear face, the hook tip stands proud of this face by at least the diameter of the hook bar, and the lifting mechanism is such that the rear face is disposed substantially vertical when the hook is about to engage with the hook bar.
