Abstract (en)

A method of cutting a blank from which a container can be erected is disclosed, the blank being cut from a rectangular sheet of cardboard, corrugated board etc. The shape of the blank is such that corner portions of the sheet are cut away as waste. These corner portions are trimmed to rectangular shape, simultaneously with the cutting of the blank, and one or more slots are cut in them. These trimmed portions are used in a stack of containers to interlink upstanding pegs of adjacent containers, the pegs being passed through said slots.
