Abstract (en)
[origin: WO8501083A1] Fuel metering device for an internal combustion engine fitted with an injection device and an independent ignition, with a control apparatus (17) producing at least as a function of the rotation speed (12) of the internal combustion engine injection pulses intended to the injection valves, a switching (19) being operated for controlling the injection valves by means of the injection pulses coming from the ignition unit (15) of the internal combustion engine in case of perturbation of the control apparatus. The switching may be carried out either by removing the central plug of the control apparatus or by an automatic error detection by means of a rotational speed relay.
