Abstract (en)

[origin: EP0155361A2] 1. A process for sealing leaky uranium hexafluoride containers by introduction into a protective container, characterized in that the leak is covered with a glass fibre-reinforced, quick-curing polyester resin, the polyester resin is covered over after curing with a glass-fibre-reinforced epoxy resin, a plastics film is then wrapped around the container in the region of the leak after curing of the epoxy resin and the uranium hexafluoride container thus sealed is then introduced into a simple, pressure-tight protective vessel provided with elements for handling and for transport.
