Abstract (en)  
[origin: EP0155914A2] The present invention consists in a system to keep glasses or other containers in plastics, paper or some other light material, even if empty, from overturning. Is is a ring-shaped object, suitably moulded, in the proper weight and of the conveniently calibrated inside diameter so as to receive and firmly fasten a glass at its base, thus becoming one thing only with it. Besides, if realized in various colours, it makes it possible for the person who is using it to easily single out his own glass among many others.
