Abstract (en)
[origin: EP0155929A2] 1. Mobile soil-tamping appliance with a first roller runner (4) and a second roller runner (6), the two roller runners having rollers (5, 7) of differing design, and the roller runners being capable of being brought selectively into the working position by means of a lifting device (13), characterized in that connected to the second roller runner (6) is a distortion-resistant intermediate frame (11) which is itself connectable to the first roller runner (4) or to the frame of the soil-tamping appliance selectively releasably, pivotably and non-pivotably under operating conditions and on which the second roller runner (6) is mounted pivotably and against which the lifting device (13) of the second roller runner (6) is supported.
