Abstract (en)

[origin: US4688692A] Apparatus for joining sheet metal elements of a housing for an electrical appliance has a centering lug, disposed on a first sheet metal element, with a wedged shaped recess formed therein. Furthermore, disposed on a second sheet metal element is a centering hole to seat the centering lug, the latter penetrating the centering hole, but limited by a stop, until the top surface of the second sheet metal element with the centering hole and a bevel of the wedged shaped recess form a wedged shaped seating hole with a self-locking aperture angle for seating a spring wire elastically engaging the seating hole.
