Abstract (en)
[origin: EP0156101A2] A layered clothing is disclosed. It has jumper-shaped main clothing and sub-clothing for wearing over the main clothing. Since both faced hook and fastener are adequately provided, the sub-clothing can be reversibly engaged to the main clothing. In this way, the layered clothing can serve for the usual purposes such as cold protection, rain protection, etc. In addition, it can offer variation of outlooks using only one sub-clothing and one main clothing by selectively reversibly engaging them in several different ways.
