Abstract (en)
[origin: EP0156350A2] 1. A device for attaching rails (14, 40) preferably in the form of stock rails or track rails with associated check rails stands in the area of points and/or crossings, comprising a sole plate (10, 34, 70) for the rail with rail attachment plate (12, 36, 80) arranged detachably thereon, such as slide chair or check rail base plate, where the rail attachment plate extends on one side of the rail past the rail foot (18, 38), and at least one spring element (22, 24, 46, 48) interacting with the rail attachment plate, characterized in that the spring element (22, 24, 46, 48) protrudes from the rail attachment plate (12, 36, 80), is attachable on the base plate on that side of the rail (14, 40) opposite the rail attachment plate, and is clampable such that the rail foot (18, 38) can be held down by the rail attachment plate.
