Abstract (en)
[origin: EP0156353A2] 1. A pack made from board for at least one, particularly conically shaped container (20) which is surrounded on four sides by panels of the pack, the ends of which are open, the panels (1, 6, 7, 10, 11) of the pack being arranged at least approximately at right angles to each other and tabs (14), which are located a certain distance away from the side panels (6, 7), project inwards into the pack and engage the wall sections of the container (20) facing the side panels of the pack, being cut and creased from either the base panel or the top panel (1 or 10/11) of the pack, depending on which is adjacent to the narrower of the base or top of the container (20), wherein the tabs (14) are at least approximately elliptical in shape, the longitudinal axis of the ellipses running parallel to the line of connection (8, 9) to the side panel (6, 7), and wherein the half of the elliptical tab facing away from this line of connection (8, 9) is die-cut from the base or top panel, whilst the half facing towards the line of connection is hinged to the rest of the panel by a crease line (16), this crease line being located a certain distance away from the line of connection (8, 9).
