Abstract (en)
[origin: EP0156627A2] An elongated strip of plastics in a flexible bag guides liquid in the bag to the bag outlet when a vacuum is applied to the outlet. The flow guide has structure which forms a plurality of interconnected spaces that in turn form flow paths in combination with the bag collapsing walls. The guide can take many forms including a net-like configuration, a pattern of alternate recesses and projections on each face of a strip, woven material, open cell sponge like material @@@hed randomly oriented fibres, material having spaced air bubbles between strips of plastic, or other such structures that can form flow paths in combination with bag wall. Also disclosed is a stretched flexible tube having a spiral slot formed therein to serve as a flow guifle. Methods of making the bags and guides are further disclosed.
