Abstract (en)

The connection between the part-carrying plate (3) and the rotating drive spindle (1) is effected by a deformable bellows (4), the inner space of which is maintained under pressure in order to ensure the application of the part (11) against the polishing disc of the machine, whilst at the same time permitting the free orientation of the said part. <IMAGE>

Abstract (fr)

La liaison entre le flasque porte-pièce (3) et la broche tournante d'entraînement (1) est opérée par un soufflet déformable (4) dont l'espace intérieur est maintenu sous pression afin d'assurer l'application de la pièce (11) contre le plateau de polissage de la machine tout en permettant la libre orientation de ladite pièce.
