Abstract (en)  
[origin: WO8501279A1] The compressed product roll (1) is comprised of a hollow rolling core (12) on which are rolled compressed products (3) mutually superposed, as well as a rolling tape (5) rolled between the rolling layers (4). The rolling tape (5) is subjected to a traction effort and holds the rolling (1) in a compressed state. The width (b) of the rolling core (12) is smaller than that of the compressed products (3) which means that the rolling core (12) is drawn in with respect to the front sides (6, 7) of the winding (1). It is thus possible to stack the rolls (1) of compressed products, their frontal sides (6, 7) laying flat with respect to each other.
