Abstract (en)

[origin: WO8500992A1] An application method in which a solution contained in an aerosol container is guided from a stem into an application member installed on a side surface of the aerosol container and is then extruded from an application surface so as to be applied to a carpet or other matting. Also disclosed is a method of effectively exterminating noxious insects, such as ticks, in matting by the above-described method. The application method is effectively carried out by an application type aerosol apparatus. The apparatus has an application unit which includes an application member secured to the outer surface of the apparatus in the longitudinal direction thereof and a guide chamber defined between inner surface of the application member and the outer surface of the apparatus, into which chamber the solution contained in the aerosol container is guided. The application unit is installed on the outer side of the aerosol container in the longitudinal direction thereof, and an inlet connected to the stem of the aerosol container is connected to the application unit, whereby the solution led from the inlet is supplied to the outer surface of the application unit.
