Abstract (en)

This invention relates to a foot instep securing device particularly useful with rear entrance ski boots, which comprises a foot instep presser (1) housed within the shell (2) of a ski boot and at least one link element (10) overlying said presser (1) and connected to a means (13-16) of adjusting its working length. A feature of the invention is that the means (13-16) of adjusting the link element working length is actuated directly by rotation of the rear quarter (3) of the ski boot as the ski boot is opened or closed.
