Abstract (en)  
[origin: EP0157159A2] 1. A switch cabinet comprising a door (10) with two openings (12, 13) therethrough on the closure side, wherein mounted on the door (10) are a lock plate (40) with a closure actuating element (25) and a lock element (39), which are passed through the openings to the back of the door, characterized in that the two openings (12, 13) are of the same configuration and are arranged symmetrically with respect to the horizontal centre line of the door (10), that instead of the lock plate (40) further lock plates (20) can be mounted to the door (10), which carry only a closure actuating element (25) or only a closure actuating element (29) combined with a lock element (39), and that the closure actuating element (25) or the closure actuating element (29) combined with a lock element (39) is respectively passed only through one opening (for example 12) in the door (10) while the further lock plate (20) covers over the respective other opening (for example 13).
