Abstract (en)
[origin: EP0157298A2] 1. A heel binding comprising a base plate adapted to be secured to the ski or guided, respectively, in a guide rail in the longitudinal direction of the ski, and a bearing block (2) of substantially U-shaped cross-sectional configuration supported on said base plate (1) and having an upper portion whereat a unit (9) consisting of a sole hold-down member (7) and a step spur (8) is mounted for pivoting about axle pins (3), and in a portion of which spaced from said axle pins (3), preferably a lower portion, there is disposed a control lever (11, 11') operatively disposed between a pressure member (6) biased by a detent spring (5), and said unit (9), a transmitting lever (13, 13') associated to said control lever (11, 11') being pivotally mounted in said unit (9) about an axis (14), characterized in that said transmitting lever (13, 13') and said control lever (11, 11') are provided respectively with a detent notch (19) and a pin (20), or a projection (13a') and a detent notch (11c'), which in the skiing position of the heel binding are separated from one another while being in mutual engagement in the step-in position, and in that in the skiing position and during the first phase of the unintentional release operation said control lever (11, 11') is in engagement with or slides along, respectively, a control curve provided directly on the side of said sole hold-down member (7, 7') facing away from the ski boot.
