Abstract (en)

[origin: EP0157377A2] The method and the device, which may or may not have a separate feeler and is illustrated by way of example in Fig. 1, starts from a moved, motor-driven ladling vessel (10, 11, 40, 13), both the ladling process and the dosing process being effected in fine steps or without steps by the mover (20). The vertical and/or angular position of the dosing vessel (10, 11, 40, 13) are controlled by electronic control stipulations which, for their part, are stored in stored-program electronic controls (50) and which furthermore also permit the portion-wise pouring out of different quantities by weight in one pouring operation. The ladling vessel is assigned mover mechanisms (20, 22, 50) which on the one hand control the ladling position and/or on the other hand control its pouring angle. <IMAGE>
