Abstract (en)
[origin: WO8501526A1] Longitudinal weft guides, as well as other weft guides and/or thread hooks are added to the hook needles and to the corresponding thread guides. In order to simplify the drive thereof, the drive devices (44, 46) for the rods (22, 24) of the longitudinal weft guides as well as the drive device (48) for the rod (32) of the thread hooks are arranged together on one side of the machine frame and are combined. To this effect, there is provided a common drive shaft (50) to which are connected oscillating levers (68) of the drive devices (44, 46) for the longitudinal weft guides (14, 18). Furthermore, the drive shaft (50) is provided with an excentric connected by a connecting rod (94) to an oscillating lever (96) to which is connected via a coupling rod the thread hook rod.
