Abstract (en)
[origin: EP0158845A2] 1. Connector socket for connector pins with a contact surface (9), which can be pressed against a connector pin, a conductor connection area (2) and a surrounding injection-moulded insulating sheath (20), the connector socket comprising a cylindrical, sleeve-shaped base member (1) between the contact surface (9) and the conductor connection area (2), characterised in that a partial surface (11) of the base member wall is bent into the base member cavity (13) about a bending line (12) extending approximately at a right angle to the plug-in axis (E) and bears via its entire edge (14) against the inner wall (15) of the base member cavity (13) as a locking disc.
