Abstract (en)  
[origin: JPS60226830A] PURPOSE:A separating agent effective preparing a pure compound, having high- quality optical isomer discrimination ability, showing different adsorption power on optical isomers of compound, carrying out easily optical resolution, comprising a 1,3-glucan as an active ingredient. CONSTITUTION:A separating agent containing a 1,3-glucan or its derivative as an active component. The active ingredient is a polysaccharide having anhydroglucose polymerized in a bond as shown by the formula I or formula II as a constituent element or a derivative wherein its hydroxyl group is replaced with some atom group. To use the separating agent, gas chromatography, liquid chromatography, etc. are usually used, and membrane separation can be carried out. When liquid chromatography is used, the separating agent is ordinarily powdered. To obtain the powder, preferably it is ground, or made into a bead state.
