Abstract (en)
[origin: US4744309A] A table for universal deposition of dental tools, is disclosed including a receiving part (3) the outer limitation of which contains at least over a portion of its perimeter a rim (4) with a rim end portion (4b) extending downward in relation to the deposit surface (5) of the receiving part (3). The receiving part (3) is adapted to be attached to a mount (9) comprises a carrier (9) with a horizontal bearing surface (10) for the receiving part (3). A depression (11) is located in the carrier (9) and adapted to receive the rim end portion (4b) of the receiving part (3) to provide a mechanically locking engagement. The mount also includes a projection (12) which is arranged at a distance from the depression (11) corresponding to the rim height of the receiving part (3) and which extends at least partially over the upper surface (6) of the rim (4) when the receiving part (3) is placed on the carrier (9).
