Abstract (en)

A wire-tensioning device for a coil-winding machine can be arranged between a supply reel and a core or jig on which the wire is to be wound. The wire-tensioning device comprises a rotatable tensioning wheel (15) which is coupled to a drive unit (19). The wheel (15) has a circumferential surface (29) for supporting the winding wire and is equipped with a wire guide (31) for guiding the wire towards a specific location on the wire-supporting surface (29) of the wheel (15).
