Abstract (en)

[origin: EP0159219A1] 1. Programmer in which an assembly of program-cams (9) arranged for being moved automatically into rotation comprises several programs established successively and a rotatable selector element (2) fast with a driving axis of which the angular positioning evables to choose one among the said programs, characterized in that it comprises : - a control lever (3) cooperating with the rotatable selector element (2) and axiably movable with respect to said assembly of program-cams (9) ; - means (10, 4, 2) for provoking the axial displacement of said control lever (3) into one or the other of two positions with respect to the assembly of program-cams (9) ; - a first and second contact with which the lever (3) cooperates indirectly, in a first and second position respectively ; - means (10, 4, 2) for enabling the driving into rotation of the selector element (2) by the control lever (3) acting in said first position.
