Abstract (en)
[origin: EP0159271A2] 1. A lock for a slide fastener (2) provided with at least one cursor (3, 4) carrying a handle (5, 6) formed with a hole (7, 8) and pivoting with respect to the cursor (3, 4), including a casing (10) fixed to the volume (1) to be closed by the slide fastener (2), said casing (10) being provided with an opening (14) for receiving at least one handle (5, 6) of a cursor (3, 4) of the fastener (2), and a mobile latching member (13) extending through said opening (14) and the hole (7, 8) of the handle (5, 6), characterized by the fact that said latching member is constituted of a cam (13) rigidly connected to a rotor (12) controlled by a coded key, said cam being mounted at the end of said rotor (12) which is opposite the introduction of the key, the pivoting axis of rotor (12) being substantially orthogonal to the slide fastener (2) in the region of said casing (10).
