Abstract (en)
[origin: EP0159466A2] The invention relates to an electrical connector having a base body of dielectric material with a chamber, and a metal retaining element, arranged in the chamber and supported on the walls of the chamber, the retaining element being a sleeve-shaped latching element (10) in which are fitted latching spring tabs (26 and 36) that have been cut free, which tabs are bent into the inner cavity, and the latching element (10) has a means for positive-locking support in the chamber of the base body (12). <IMAGE>
