Abstract (en)

[origin: EP0159761A2] Fastening device for fascine mattresses, which is fastened to a floating carrier (1, 2) and which comprises two fixed parallel spaced apart walls (11, 12) between which is retained an inflatable and deflatable hose (18) of which the minimum dimension in freely inflated condition in transverse direction between the fixed walls (11, 12) is greater than the distance between the walls. An end edge part (6) of the mattress to be fastened is inserted between one wall (12) and the deflated hose (8), and then the hose (18) is inflated thereby clamping the end edge part (6) between the hose (18) and the wall (12).
