Abstract (en)
[origin: US4599939A] The invention relates to a process and apparatus for wrapping square bales, especially fiber bales, with the aid of strip-shaped baling material, preferably baling wire. It is known to compress fibers, after having been manufactured as raw material, into fiber bales and to hold the latter together with the aid of baling wire. In this process, several baling wires are placed in individual turns around the bale and joined at their ends. This type of wrapping is complicated and is to be simplified. The basic aspect of the invention resides in that the baling wire is placed continuously around the bale and that the wire turns extend, on at least two mutually opposed bale sides, in parallel to one another as well as in parallel to bale edges.

Abstract (de)
Der Kern der Erfindung liegt darin, daß der Umreifungsdraht fortlaufend um den Ballen gelegt wird und daß die Drahtwindungen auf mindestens zwei einander gegenüberliegenden Ballenseiten parallel zueinander sowie parallel zu Ballenkanten verlaufen.
