Abstract (en)
[origin: EP0160184A2] 1. A positioning bar device having a central control or operating lock (2) and, controlled by the positioning bars (7), additional locks (3) which are disposed above and below the operating lock (2) and have bolts (15) adapted to issue from the lock face (1) and a slider (25) movable by the positioning bar, the slider (25) being operative by way of a slot and pin connection to fully actuate the bolt (15), characterized in that the stem (15") of the bolt, the same being a sliding bolt (15), is engaged by a step-up pivoted lever (20) pivoted around a stationary steadying pin (12) of the additional lock (3) and having on its central part an actuating pin (23) engaging in the slot in the slider (25), the slot being devised as a cam (24).
