Abstract (en)
A cardboard container, comprising a lid assembled with a sleeve (10), the lid having a polygonal main panel provided with tabs perpendicularly extending from the periphery of the main panel, and the sleeve having a polygonal closure provided with flaps (11) extending inwards from the upper edge of the closure, each tab having protrusions and being inserted into a slot (13) formed in the corresponding flap of the sleeve. The slot is provided with an enlarged central opening (13a) leaving a relatively narrow opening (14) at each end of the slot to enable the protrusions of the tab to engage the side edge of the narrow end openings of the slot from underneath the flap, so as to firmly secure the lid with the sleeve.
