Abstract (en)
[origin: EP0160816A2] 1. Dispenser capsule for aerosol containers (10), consisting of a capsule housing (1) and an actuating button (2) with a tubular extension (6) insertable into or attachable onto a valve tube (11) of the aerosol container (10), with a dispenser nozzle (8) and with a feed channel (7) connected to the latter on the one hand and to the tubular extension (6) on the other hand and as part of the actuating button (2) for the container content to be dispensed, the actuating button (2) being so shaped in one piece with the capsule housing (1) that it is connected to the capsule housing (1) at its rear end by means of separating webs (5) having predetermined breaking points and at the other end via a pivot joint (4), characterized in that the feed channel (7) extends immediately above the pivot joint (4) between the dispenser nozzle (8) and the tubular extension (6) and is placed so much lower than the upper face of the dispenser capsule that the distance from the upper face is greater than the length of the tubular extension (6).
