Abstract (en)
[origin: ES8608287A1] A refining roll drive for chocolate refining machines, wherein motion is transmitted by means of straight-cog pulleys and clogged drive belts. Two drive motors are provided, one on each side of the machine. One motor drives the odd-located rolls, and the other motor drives the even-located rolls. Any oscillable rolls provided would be carried on a common holder also carrying their respective drive motor.
