Abstract (en)

[origin: ES8609557A1] The invention provides a high performance anchorage device for any type of ground, which is easy to use with known driving-in or propulsion processes. It comprises a main rigid body having at least one leading end for driving into the ground, at least one articulated element pivotably connected to said main body, and at least one anchorage line connected to said main body by a flexible connection. It further comprises the following combination: (a) a cranked shape of said articulated element and (b) location of the center of gravity between the fastening point of said anchorage line and the articulation of said articulated element, said articulation and said fastening point being situated on each side of the driving in plane (DELTA).
