Abstract (en)

A flexible container device, preferably for medical use, comprising a container and a hose-shaped connector. The container, which is a sterile container, has a tearable-away first cover layer (11) over locations (12) for connecting the hose. The hose, which is sterilized, has an adhesive surface covered by a second tearable-away cover layer (19). Inside the hose there is a puncturing element (21) manoeuvrable from the other end of the hose for puncturing the container under a maintained sterile environment after the connector has been mounted.
