Abstract (en)
[origin: WO8502360A1] The device for supporting on a non horizontal surface an apparatus capable of moving along such surface is comprised of a support (1) which moves perpendicularly to the surface on which the apparatus is bearing, a compensation bar (5) of which the flexibility is maintained within certain limits to enable the adaptation to curvature variations, and at least two sections cups (6) mounted at the end of the compensation bar. A safer and less costly support is thereby obtained.

Abstract (fr)
Le dispositif de maintien sur une surface non horizontale d'un appareil capable de se déplacer le long de cette surface est constitué d'un support (1) mobile perpendiculairement à la surface qui porte l'appareil, d'un palonnier (5) de flexibilité maintenue dans certaines limites pour permettre son adaptation aux variations de courbure, et d'au moins deux ventouses (6) montées vers les extrémités du palonnier. On obtient ainsi un maintien plus sûr et moins coûteux.
