Abstract (en)
[origin: EP0163105A1] 1. A mechanism for transporting crosswalls (bulkheads) in the holds of ships, having rollers fastened to the bulkhead (20), which in service are guided on rails on the edge (14, 15) of the coaming of the hold, and having a device for carrying over the bulkhead from a state of rest in which it is fixed with respect to the hold, into a travelling state in which it may be moved relatively to the hold, characterized in that the rollers (31, 33; 41, 43) are supported on bogies (30, 40) which are fastened to the bulkhead (20) to be movable relatively to it and in the state of rest of the bulkhead may be brought out of engagement with the edge of the coaming and moved into the hold.
